ABSTRACT

QuickCare Services provides various services ranging from Household help to Medical help. Many a times an individual has to face difficulties in finding a proper physiotherapist if he/she is recovering from any serious fracture or struggling to maintain a proper body posture and also a proper childcare support if they want anyone to take care of his/her infant child or even a proper housemaid , Quickcare Services resolves such issues with ease. The frontend of this project is built on React and for the backend it uses Springboot whilst using MySQL for the database..

ACKNOWLEDGEMENT

I take this occasion to thank God, almighty for blessing us with his grace and taking our endeavor to a successful culmination. I extend my sincere and heartfelt thanks to our esteemed guide, **Mrs. Manjiry Deshpande** for providing me with the right guidance and advice at the crucial juncture sand for showing me the right way. I extend my sincere thanks to our respected **Centre Co-Ordinator Mr.Rohit Puranik**, for allowing us to use the facilities available. I would like to thank the other faculty members also, at this occasion. Last but not the least, I would like to thank my friends and family for the support and encouragement they have given me during the course of our work.

INTRODUCTION

As technology is ruling the industrial world, manual activities and documentation are digitalizing. Our application tends to ease the process of finding caretaker in hour of need using technology. When any elderly or ailing family member is unwell and need help to do their routine work or need exceptional care at that time our application comes as helpful. In that situation we must exhaustively search for skilled people who can help within time constraint. Our application comes as handy here, we provide trained nurses, ward boy to give special attention to them. User does not have to go through the pain of searching Caretaker. We can get skilled help on our fingertips. Our application provides a platform that help to connect skilled nurses, ward boy to needful people for nursing services.

Quick care service/taker is a service provider system used for providing service to care receiver(customer) by any type of service provider according to the need of care receiver(customer). This system works on two different users:

1. Care provider (Caretaker) - Care Provider provides the service to the care receiver. Caretaker needs to register into the platform according to their hourly charges and approve the request which is being sent by customer.
2. Care receiver (Customer) - Care Receiver receives the service from care provider. Customer needs to register in platform to enter and book the caretaker according to the location and type of service he wants. Accordingly, customer will end up booking for Caretaker as per their need.

This system helps the service provider to reach to their care receiver(customer) and contact them quickly.

Customers must add their details and their need and based on their requirement the nearest caretaker can contact their customer and they can also keep track on their orders. The main objective is to help the customer by providing the service and solve their problem as soon as possible.

PROJECT OBJECTIVE AND SCOPE

QCS (Quick Care Service) allows caretaker and customer to register into the platform. Our platform provide service to customer without wasting much time searching for the caretaker. On the other side, caretaker gets a platform for getting a job and providing services. It is easy for customer and caretaker to see details of booking and the records which gets updated every time action is done in the account.

- 1.Customer (Caretaker/Care Receiver) registration, customer login, customer credential authentication. Customers need to fill required attributes to register.
- 2.Care Receiver can add patient details and view patient list. Care receiver can choose type of service and service time span. In patient list care receiver can delete and edit details of patient.
- 3.Care Receiver can book caretaker according to the location and type of care he wants and send request.
- 4.Care Receiver can view requested caretaker list where he can see status of request and cancel request. Care Receiver can do payment if status is accepted and if rejected can view the reason for it.
- 5.In payment option he can choose mode of payment and pay the amount displayed on the screen. Care receiver can also give feedback for caretaker and generate report for the service received.
6. Caretaker can view all request and can accept or reject them. If he wants to reject

request,he must give reason for rejection.

7.In patient list caretaker can view patient's list, their details and whether request accepted or not. He can also view feedback received from care receiver

PROJECT OVERVIEW

QCS (Quick Care Service) allows caretaker and customer to register into the platform.

Our platform provide service to customer without wasting much time searching for the caretaker. On the other side, caretaker gets a platform for getting a job and providing services. It is easy for customer and caretaker to see details of booking and the records which gets updated every time action is done in the account.

1. Care provider (Caretaker) - Care Provider provides the service to the care receiver. Caretaker needs to register into the platform according to their hourly charges and approve the request which is being sent by customer.
2. Care receiver (Customer) - Care Receiver receives the service from care provider. Customer needs to registerin platform to enter and book the caretaker according to the location and type of service he wants. Accordingly, customer will end up booking for Caretaker as per their need.

This system helps the service provider to reach to their care receiver(customer) and contact them quickly.

Modification and improvement over the existing Implementation:

As of now we have not come across no such existing project in the market. Existing services only have only

Project Plan:

No. of User's and Modules

- **Users-**

- 1)caretaker
- 2)customer

- **Modules –**

SERVICE RECEIVER MODULE (CUSTOMER):

Customer in this application who is service receiver, who will receive service after their service order being placed. Customers must register themselves if they don't have their profile, once the registration is done, they can proceed with the login process, if they already have profile, they can directly login into their dashboard. once they reach their dashboard, they can provide placed their service request and can also see their previous records of orders.

- REGISTRATION/LOGIN
- ADDING PERSONAL DETAILS
- ADDING PATIENT DETAILS
- REQUESTED CARETAKER LIST
- BOOKING SERVICE
- PAYMENT

SERVICE PROVIDER MODULE (CARETAKER):

Service provider is one of the users who will provide the services according to the customer request. Service provider also must register themselves if they do not have their profile, once the registration is done, they can proceed with the login process, if they already have profile, they can directly login into their dashboard. Once they reach their dashboard, they can see the customer request in the order list and can provide their services accordingly.

- REGISTRATION/LOGIN
- CARETAKER DASHBOARD
- ACCEPT / DECLINE OF SERVICE
- REASON FOR REJECTION
- PATIENT HISTORY

REGISTRATION MODULE:

Each user needs to get register before entering platform. The user can check the caregiver details and availability of the caregiver which is nearby them by sorting based on location and type of service. They can also check the booking status on notification section on customer dashboard.

LOGIN MODULE:

Users who have completed the registration process once they can access the application anytime in future through just login. After they have verified their username and password, they can directly type the username and password to login.

profession	varchar(45)	NO	PRI	NULL	

ERD / Database Tables:

IACSD

DATABASE DESIGN:

Databases are the storehouses of data used in the software systems. The data is stored in Tables inside the database. Several tables are created for the manipulation of the data for the system. Two essential settings for a database are

- Primary key - the field that is unique for all the record occurrences
- Foreign key - the field used to set relation between tables

Normalization is a technique to avoid redundancy in the tables.

SYSTEM TOOLS:

The various system tools that have been used in developing both the front end and the back end of the project are being discussed in this chapter.

FRONT END

React is a library which is developed by Facebook and is utilized to implement the frontend. React(also known as React.js or ReactJS) is a free and open-source front-end JavaScript library for building user interfaces or UI components. It is maintained by Facebook and a community of individual developers and companies. React can be used as a base in the development of single page or mobile applications. However, React is only concerned with state management and rendering that state to the DOM, so creating React applications usually requires the use of additional libraries for routing, as well as certain client-side functionality.

BACKEND:

The back end is implemented using MySQL which is used to design databases.

MySQL:

MySQL is the world's second most widely used open-source relational database Management system (RDBMS). The SQL phrase stands for Structured Query Language.

An application software called Navicert was used to design the tables in MySQL.

Spring-Boot:

This is used to connect MYSQL and fetch data from database and store the data in database. The Spring Framework is an application framework and inversion of control container for the Java platform. The framework's core features can be used by any Java application, but there Are extensions for building web applications on top of the Java EE (Enterprise Edition) platform. Although the framework does not impose any specific programming model, it has become popular in the Java community as an addition to the Enterprise JavaBeans (EJB) model. The Spring Framework is Open-source Framework.

Project Requirements

Hardware

The system requires the following hardware:

- RAM: 1 GB (further increase that as per requirement.)
- Hard Disk: 80 GB (further increase that as per requirement.)
- Display: 1024 * 768, True Type Color-32 Bit
- Mouse: Any Normal Mouse.
- Keyboard: Any window Supported Keyboard. 1.5.2 Software
- Database Server : Microsoft SQL Server Version- 8.0.30
- Web Server : Internet Information Server
- Technologies : J2EE, Spring boot -3.9.18, ReactJs Node V-18.12.1

After selecting appointments for patient

The image shows a 'CUSTOMER REGISTRATION' form overlaid on a background of wood and paper. The form is a light beige rounded rectangle with a subtle shadow. It contains several input fields with labels above them. The 'Email ID' field is pre-filled with 'ishwar@gmail.com'. At the bottom right are two buttons: a green 'Register' button and a red 'Cancel' button. The background features a wooden texture and a piece of brown paper with the word 'EXPLORE' in large, dark green, blocky letters.

After Customer Login Customer will redirect to Customer Dashboard

The image shows a 'User Login' form with a light blue background. The form is a rounded rectangle with a light gray border. It contains the following elements:

- Title:** 'User Login' in a black serif font, positioned at the top left of the form.
- Icon:** A circular icon with a blue background, featuring an orange person silhouette and a yellow padlock, centered below the title.
- Email Input:** A teal-colored rectangular input field with the placeholder text 'Enter Your Email ID' in a light gray sans-serif font.
- Password Input:** A teal-colored rectangular input field with the placeholder text 'Enter Your Password' in a light gray sans-serif font.
- Login Button:** A green rectangular button with the text 'Login' in a white sans-serif font, centered below the password input field.

After selecting “Add new patient details” successfully

The image shows a web form titled "Add Patient Details" with a teal background. The form contains the following fields and controls:

- First name:** A text input field with the placeholder "First Name".
- Gender:** A text input field with the placeholder "gender".
- Age:** A text input field with the placeholder "age".
- Location:** A text input field with the placeholder "Location".
- Service hr:** A text input field with the placeholder "service hr".
- From_date:** A date input field with the placeholder "dd-mm-yyyy" and a calendar icon.
- To_date:** A date input field with the placeholder "dd-mm-yyyy" and a calendar icon.
- Select Caretaker Type :** A label above a dropdown menu.
- Choose caretype :** The dropdown menu's text.
- Save:** A green button.
- Cancel:** A red button.

Patient details added successfully

The screenshot displays a web application interface for managing patient care. At the top, a navigation bar includes links for 'QUICKCARESERVICE', 'User Dashboard', 'Patient', 'Caretaker', 'Requested caretaker List', and 'Logout'. A green notification box above the 'Patient' link states '@Patient Added Successfully!!'. Below the navigation bar, a red button labeled 'PATIENT LIST' is centered. The main content area features a table with the following columns: Patient ID, Name, Location, From Date, To Date, Caretype, and Action. The table contains three entries. Each entry has 'View', 'Update', and 'Delete' buttons in the Action column. The background of the page features a DNA double helix and a grid of data.

Patient ID	Name	Location	From Date	To Date	Caretype	Action

Payment

The image displays two sequential screenshots of the 'Quick Care Service' web application, specifically the payment interface.

Top Screenshot: Payment Options

- Header:** The top navigation bar includes the 'Quick Care Service' logo, a 'Customer Dashboard' link with a user icon, and three main menu items: 'Patient Details', 'Book Caretaker', and 'Your Request List'. On the right, there are 'Account' and 'Sign Out' buttons.
- Payment Section:** A box titled 'Payment options' contains two radio buttons for selection:
 - Debit/Credit Card:** This option is selected. It includes a card icon, a 'Card Number' field with the value '1234 5678 9876 5875', a 'cvv' field, and an 'Expiry Date' field with 'Date' and 'Year' dropdown menus.
 - UPI:** This option is unselected. It includes a 'UPI Address' text input field.
- Action:** A large purple button at the bottom of the payment section reads 'Proceed to Pay Rs. 1200'.

Bottom Screenshot: Success Message

- Header:** The header is identical to the top screenshot.
- Message Box:** A central box displays a success message: 'Payment is done successfully! (caretakename) is booked successfully!'. Below the message is an 'Ok' button.

Patient Request status

The screenshot shows the 'Patient Request status' dashboard in the Quick Care Service application. The dashboard includes a header with the 'Quick Care Service' logo, a 'Status' indicator, and navigation links for 'Feedback Received', 'Your Patient History', 'Account', and 'Sign Out'. The main content area displays a table with patient request details.

ID	P Name	Location	Gender	Age	From date	To date	Service hr	Action
1	Priya	Nagpur	F	20	2021-04-05	2021-04-05	6 hrs	<input checked="" type="checkbox"/> <input type="checkbox"/>
2	Jenny	Nagpur	F	23	2021-04-05	2021-04-05	5 hrs	<input checked="" type="checkbox"/> <input type="checkbox"/>
3	Stefan	Nagpur	M	55	2021-04-05	2021-04-05	7 hrs	<input checked="" type="checkbox"/> <input type="checkbox"/>

Patient Accepted status

The screenshot shows the 'Patient Request status' dashboard with a success message overlay. The message states: 'You have successfully accepted the request!'. The message box has an 'OK' button. The table below the message shows the same patient request data as the previous screenshot.

ID	P Name	Location	Gender	Age	From date	To date	Service hr	Action
1	Priya	Nagpur	F	20	2021-04-05	2021-04-05	6 hrs	<input checked="" type="checkbox"/> <input type="checkbox"/>
2	Jenny	Nagpur	F	23	2021-04-05	2021-04-05	5 hrs	<input checked="" type="checkbox"/> <input type="checkbox"/>
3	Stefan	Nagpur	M	55	2021-04-05	2021-04-05	7 hrs	<input checked="" type="checkbox"/> <input type="checkbox"/>

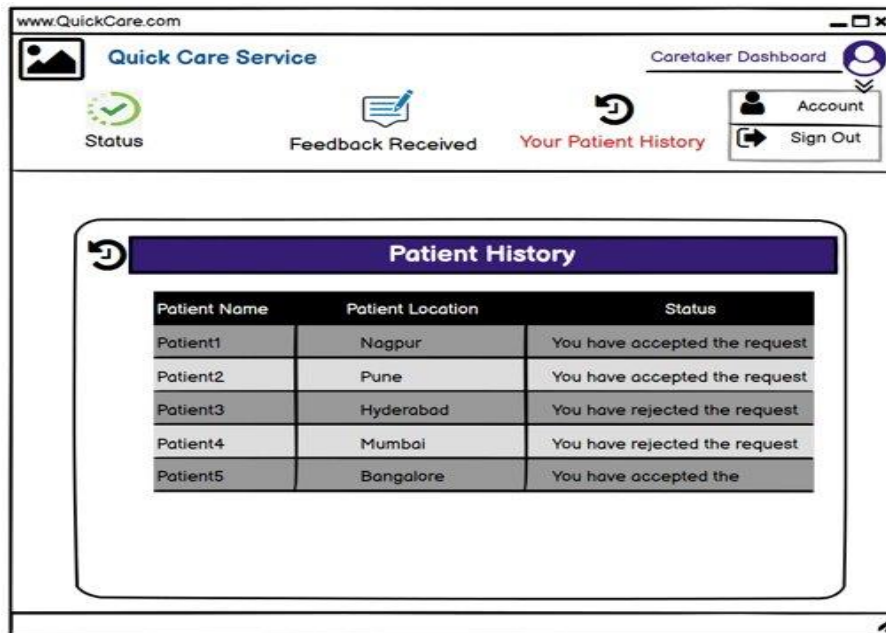

Patient Request Rejected status

The screenshot shows a web browser window with the URL www.QuickCare.com. The page has a header with the "Quick Care Service" logo and navigation links: "Status", "Feedback Received", "Your Patient History", and a "Caretaker Dashboard" section with "Account" and "Sign Out" options. Below the header is a purple bar labeled "Patient Request status". The main content area is titled "Reason For Rejection" and contains a text input field with the text "Overlapping Time working with another service." and a "Submit Reason for Rejection" button.

Reason for rejection

The screenshot shows the same web browser window as the previous one, but with a success message displayed. The "Reason For Rejection" section now shows a message box that says "Successfully submitted Reason for Rejection" with an "OK" button. The "Submit Reason for Rejection" button is still visible at the bottom of the section.

Patient history

The screenshot shows a web application titled "Quick Care Service" with a "Caretaker Dashboard". The dashboard includes navigation links for "Status", "Feedback Received", and "Your Patient History" (which is highlighted). There are also buttons for "Account" and "Sign Out". The "Patient History" section displays a table with the following data:

Patient Name	Patient Location	Status
Patient1	Nagpur	You have accepted the request
Patient2	Pune	You have accepted the request
Patient3	Hyderabad	You have rejected the request
Patient4	Mumbai	You have rejected the request
Patient5	Bangalore	You have accepted the

Future Scope:

We can latter integrate this project in centralized manner with chain of hospitals, therapy centres and such healthcare service providers etc.
